Destroys Mold  
Eradicates Viruses**

## Saber High Intensity Quartz UV Purifier

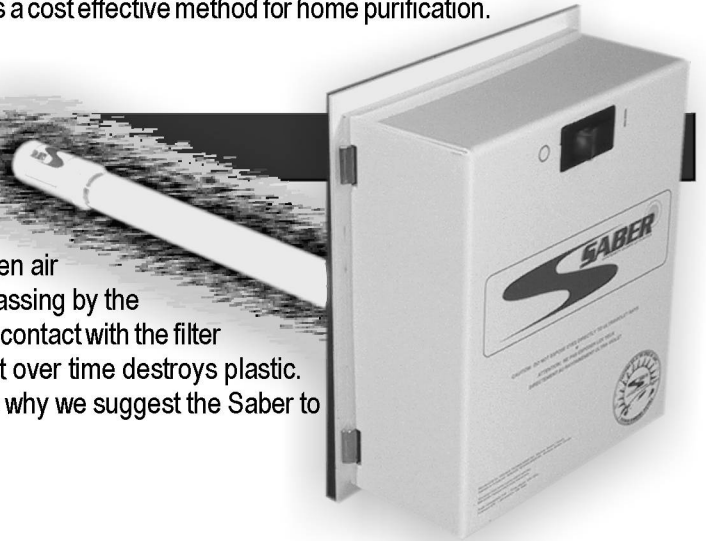

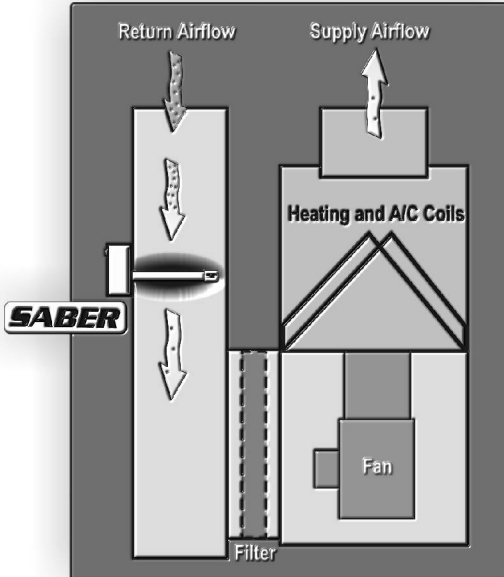

The Sanuvox Saber is our entry level Ultraviolet Air Purifier which employs a High Intensity Quartz UV Germicidal Lamp to destroy biological contaminants such as **mold, bacteria** and **viruses**. Like its namesake, the Sanuvox Saber is designed to kill. The Saber uses UVC Energy to slice through the air, destroying the biological contaminants which come in contact with the "Kill Zone". The Saber is available in two sizes, a 12" or 18" Lamp, depending on duct size. The Saber is installed in the return plenum, limiting the amount of contaminants that come in contact with the filter and coil. Because the Saber uses a High Intensity 19 mm. Quartz Lamp, only one lamp is needed, while other manufacturers need multiple lamps to obtain the same intensity. This is an added benefit, as lamp changes will be limited to one not two or more lamps per year. Extremely simple to install with lamp changes taking just seconds, the Saber is a cost effective method for home purification.

SABER WARRANTY: 1 YEAR ON PARTS, INCLUDING THE LAMP.

## Installation

Why Install in the Return Plenum?

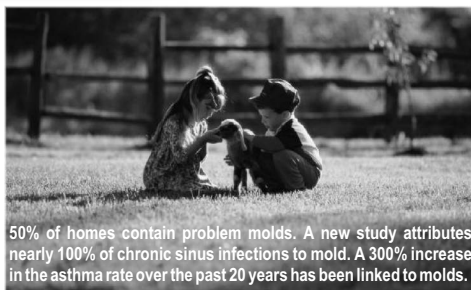

As an added benefit, if a Sanuvox Saber is installed before the filter, then air passing through the filter would be purified. The same is true for air passing by the a/c coil. This way we can limit the amount of contaminants that come in contact with the filter and coil. Another important factor in lamp placement, is that Ultraviolet Light over time destroys plastic. Installing the Purifier in the return minimizes UV exposure to plastics. That is why we suggest the Saber to be installed in the return instead of the supply plenum.

The only complete line of Residential UV Purifiers

Household bacteria sample on a Petri Dish

50% of homes contain problem molds. A new study attributes nearly 100% of chronic sinus infections to mold. A 300% increase in the asthma rate over the past 20 years has been linked to molds.

\*High Efficiency  
\*\*Independent tests in real world conditions:  
Mold levels dropped 100%  
Tuberculosis dropped more than 90%  
VOC's dropped 50%

Contaminants include but not limited to: Alternaria, Aspergillus/Penicillium, Ascospore, Cladosporium, Hyaline Fungi, Chaetomium, Cladosporium, Dreschlera/bipolaris, Smuts/Myxomycetes, Lencionellosis, Tuberculosis Bacilli, Formaldehyde, Carbon Monoxide.

Sanuvox UV Air Purifiers are Independent 3rd Party and University Tested.
